

Green Steps

Our measures for a greener future

SUSTAINABLE TRAVEL

We offer good connections to the public transport grid, a RegioRad bike rental station, charging points for e-vehicles, e-bikes and pedelecs as well as slots for vehicles of the car-sharing company SHARE NOW.

CLIMATE

Comfortable temperatures in summer and winter are provided with an energy-saving air-conditioning system and intelligent heat recovering technology.

CLIMATE PROTECTION STRATEGY

includes the annual calculation of the CO₂ emissions as well as investments aiming at avoiding emissions and offsetting currently still unavoidable emissions from operating the venue in non-exhibition mode with internationally approved climate protection projects.

VENTILATION

An innovative layer ventilation system saves energy in the halls.

RECYCLING

Our motto: Avoid, collect, sort and reuse waste. We use the food leftovers to generate electricity in a biogas plant, for example.

REGIONAL + ORGANIC + FAIR

Our catering preserves the environment and supports local suppliers.

SOLAR

About 3.63 million kWh of electricity (2021) generated on the 43,400m² of solar panels on and around the venue save 1,328t CO₂ per year.

POWER

Since 2014, we have been using CO₂-neutral electricity from hydropower.

DAYLIGHT

Natural daylight in all conference rooms and exhibition halls reduces energy consumption in a natural way.

WATER

Special fittings and certified ecological detergents set an example against water pollution and waste.
